[Next](#)

Please read the scenario below

You conducted a study and published it in an academic journal.

Another researcher contacts you and asks for access to your research materials (i.e., the data, code, and research procedures).

The researcher wants to:

- verify how your study was conducted,
- investigate whether your data and methodology are sound,
- control whether your findings can be reproduced, and
- potentially conduct a new study that corrects your study.

What is the likelihood that you would comply with the other researcher's request?

Please click on the blue bar to give your answer ranging from 0% (definitely not) to 100% (definitely).

Next

What is the reasoning behind your decision?

On the previous page, you indicated that there would be a 56% chance that you would comply with the researcher's request. Please briefly explain the reasoning behind your decision.
